Question:

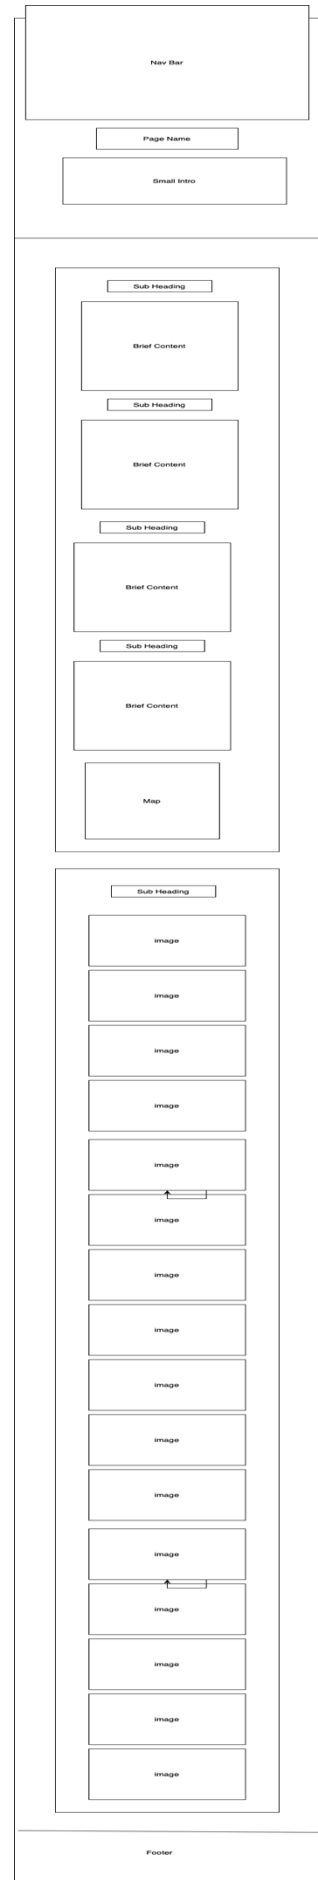

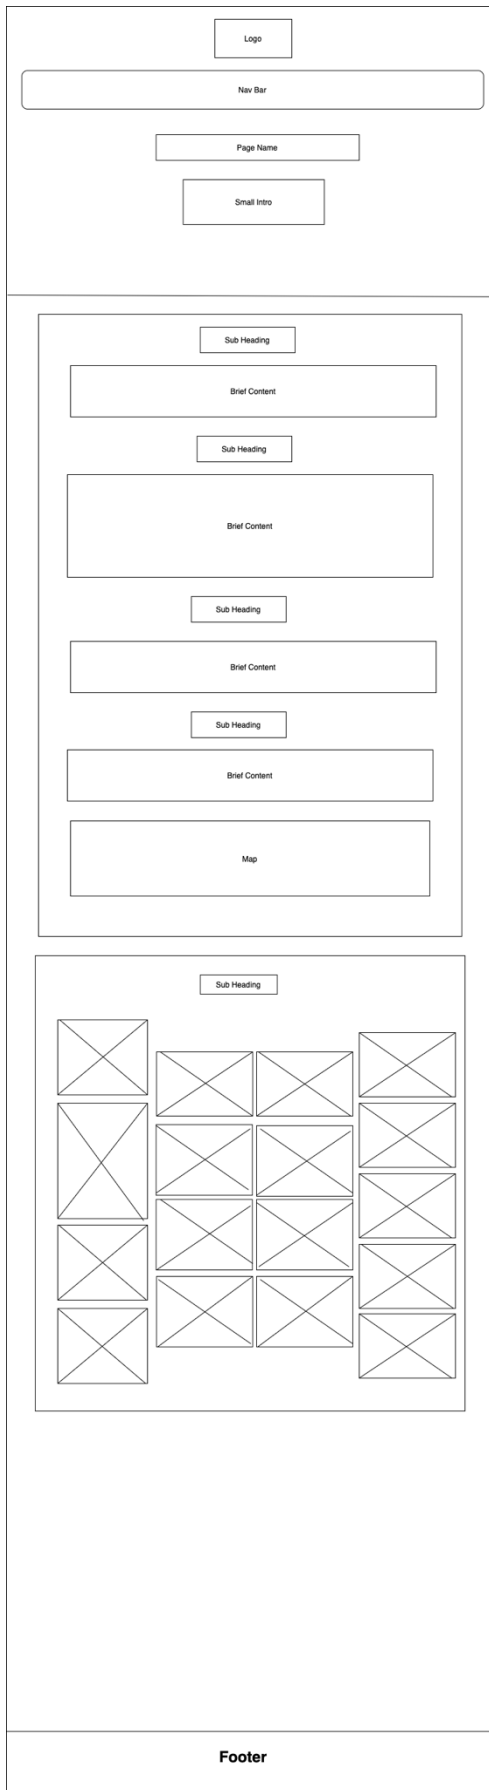

- What you learned from this project, any challenges you faced, and how you overcame them?

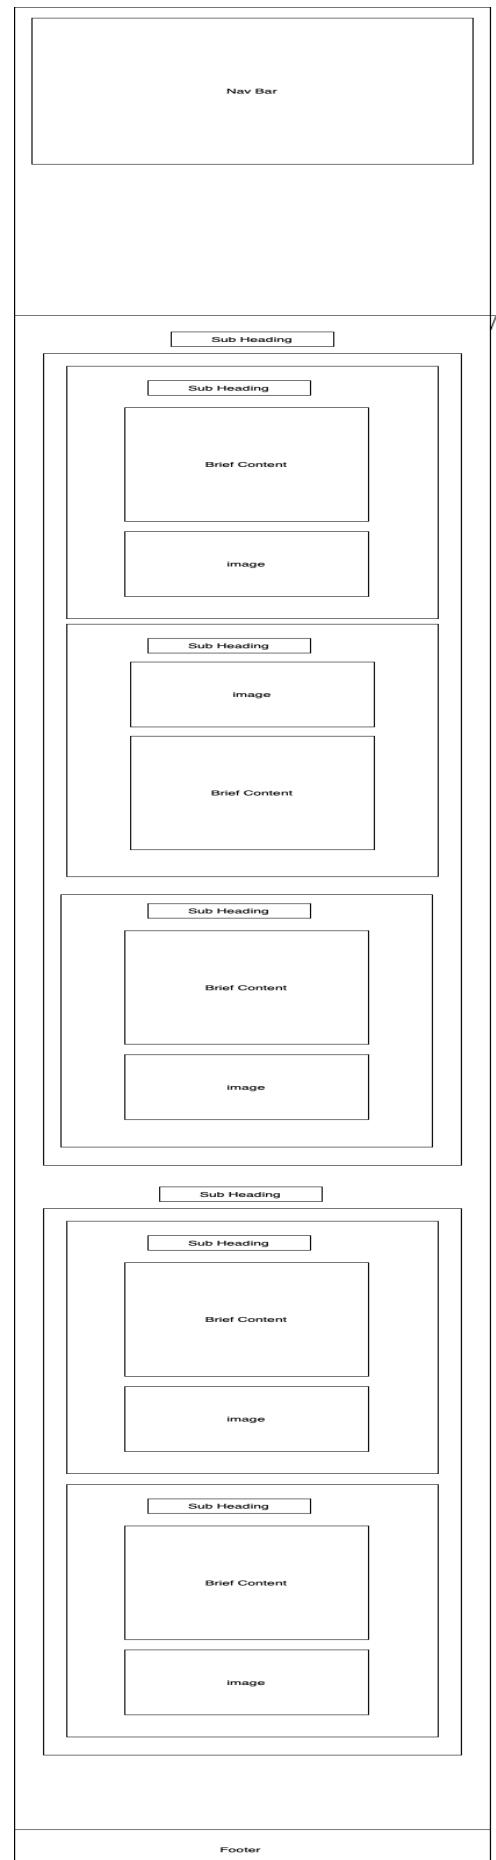

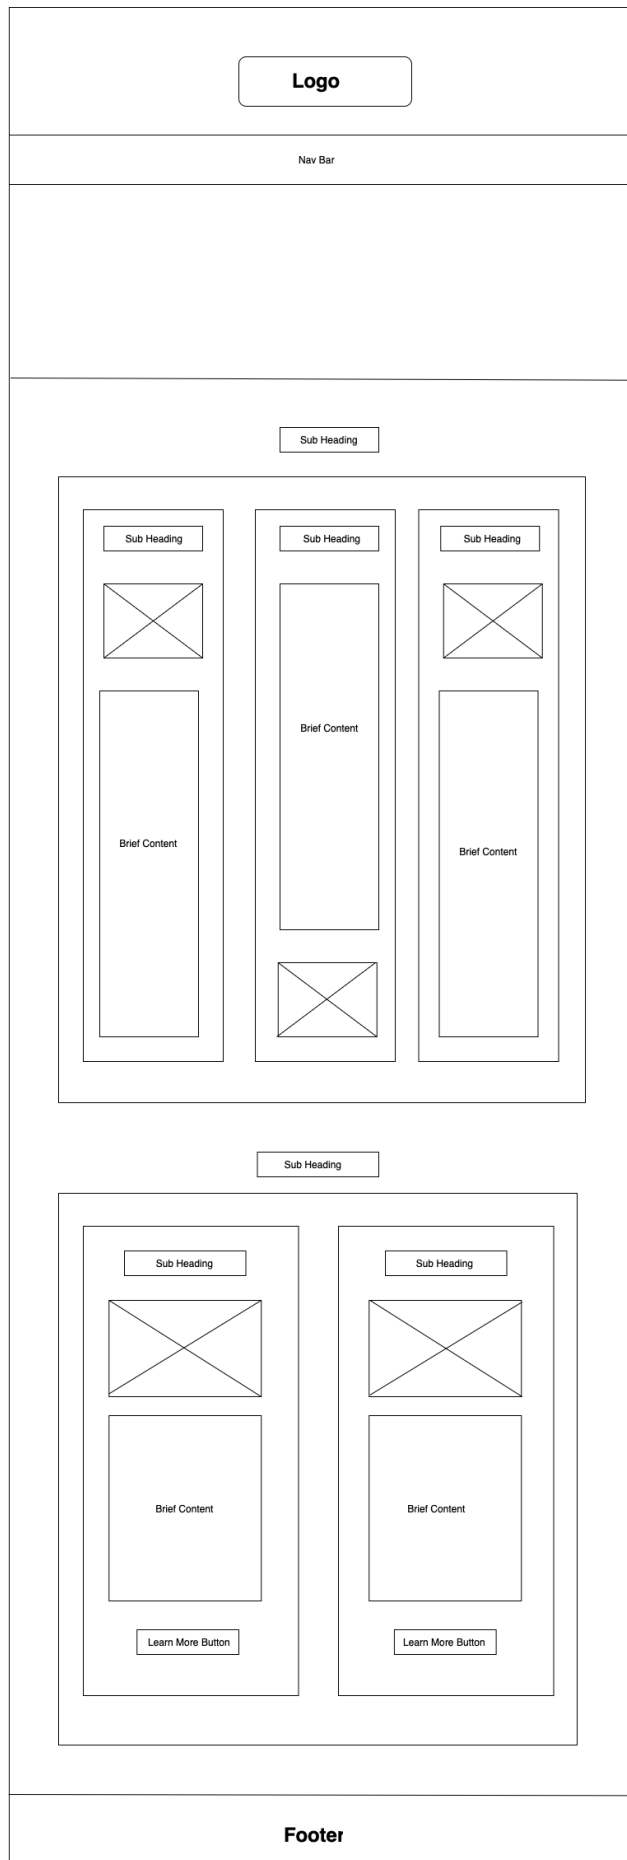

Answer:

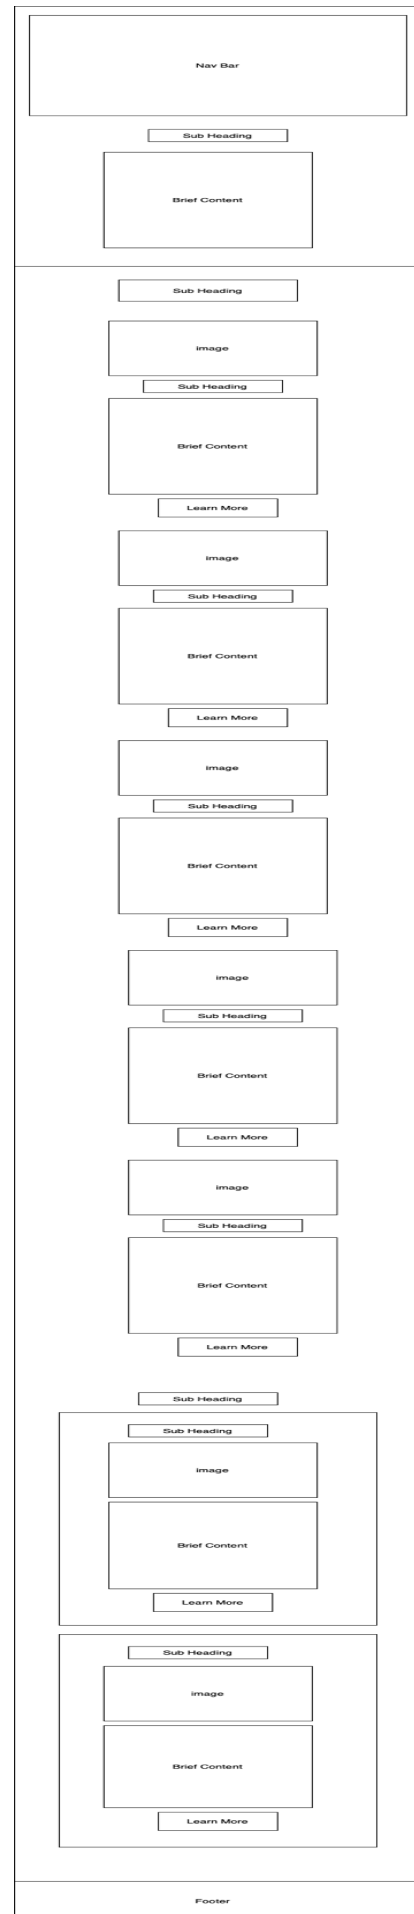

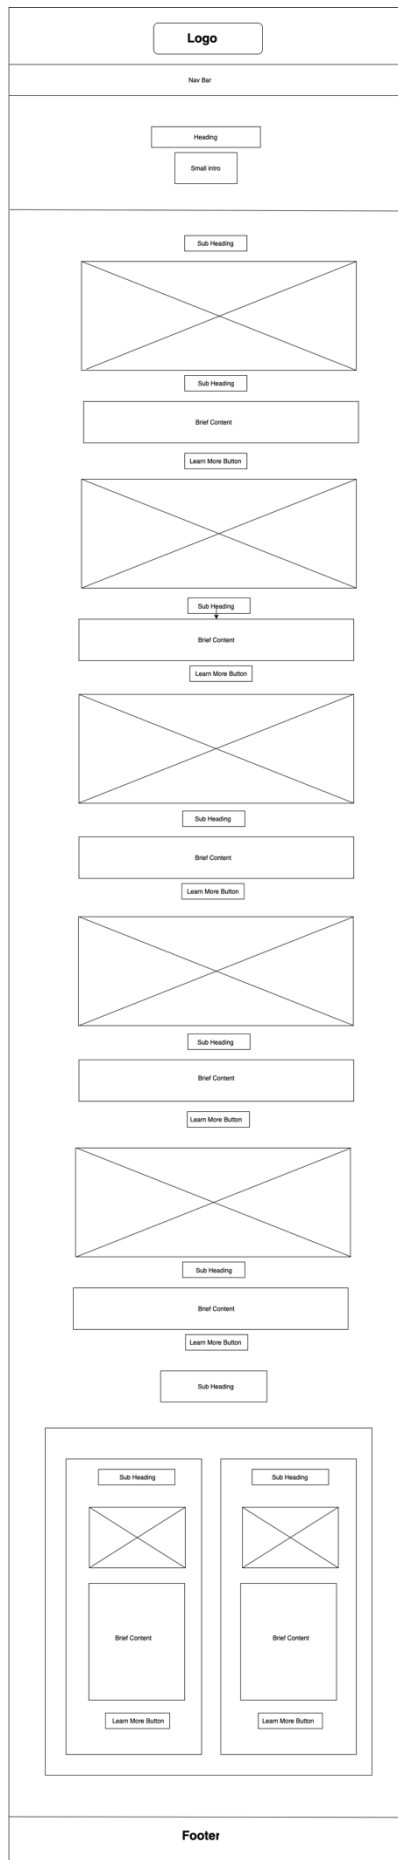

- Creating web pages using HTML and CSS has been a great and a knowledgeable journey till now for me. My user experience with HTML, CSS and Visual Studio Code has been more developed because of the project I had to do. Now I properly understand how to use HTML for develop a web structure and how to use CSS to adds the visual allure which needs to a website.
- I have faced so many challenges when I was developing the website. Some of them are; How to put a video instead of an image to the background of a one section, creating a hamburger menu for a video background, putting flexboxes, overlays and media queries for the mobile responsiveness. Mostly every time I faced a problem, I browsed YouTube for the help and most of the time I found the answers for my problems from that. Also, I got help to find solutions for my problems from W3Csl website, and my friends.
